

Adopteq enables Salvation Army to Migrate from Domino to SharePoint

The customer, Salvation Army (HeilsArmee), a global International organization who serves in over 132 countries with over 1,6 millions members, was looking for the right solution to Analyze, Migrate and replace their existing Lotus Notes/Domino Databases with new modern solutions such as SharePoint as a result of recent investments in Microsoft365.

The migration project required a product that was highly secure and stable, including the capability to handle complex Rich-Text fields, Attachments, in-lined pictures and more. All these requirements,

together with with requirements for extensive Transformation experience and development capabilities to also support their rebuild efforts, led the customer to choose Adopteq and Migrator Plus for their entire Transformation from Domino.

We are super happy to get to enable Salvation Army (HeilsArmee) on their journey to optimize and modernize their Application landscape – says Viktor Jansson, Sales and Partner Director at Adopteq.

Project at a glance

- 20+ Databases in scope for migration
- Thousands of users involved
- Global Non-profit Organization
- Migrated from Domino to SharePoint, leading to massive increase in usage and productivity gains.
