Solution Datasheet Archive Migrator Plus™

"It takes less time and saves us more money to archive than trying to find decision makers for these old databases"

Archives Unlocked!

Using Migrator Plus[™], and our unique EML approach to archive migration, we truly unlock your aged content from Domino. Archive Viewer Plus[™] is a web or desktop based application delivering an innovative, responsive and compliant way for users to search and view migrated archives stored on almost any platform!

Combined we call this Archive Migrator Plus™

Easy as 1–2–3 (freed)!

One of the biggest challenges facing companies retiring Domino is data retention. Archive Migrator Plus[™] ensures archives (mail and applications) are **accessibly compliant**, **cheaper to maintain**, **more user friendly** and **platform independent**.

Reduce Domino servers quickly

Reduce data loss risk, storage costs, licensing and user support

Bye-Bye Notes Client to read archives

Fast Facts

- Easy to use
- Desktop & Web client options
- User empowerment
- Unique archive abilities
- The most modern software on the market
- ISO 27001 compliant
- Secure software

Archive Migrator Plus[™] Benefits

Future-Proof your archive accessibility. EML is an open standard that can be accessed with any reader and searchable using any standard file search giving you the security that your content is readable (and retrievable) in years to come.

Multiple storage options from network shares to cloud storage.

1:1 data retained – all Notes content (rich text, in-line pictures, attachments, meta data) and document relationships are stored in a single EML file.

Zero lock-in allows you to not only transfer your archives to alternate storage but also search or view your content without the Archive Viewer Plus client (although we think you'll enjoy the ease of the client).

No Loss of Look and Feel. If your content is accessible, whether pictures, attachments, meta data, fields, headers etc., it will be migrated to EML and displayed almost like Notes!

Revive previously archived content to live data (should the need arise) by opening your file in any EML ready application such as a mail client.

Your security, your policies manage the data, not an additional product layer simplifying content management for your archives.
