- **ISO 27001** compliant
- **Secure** Software

Migration Modernized

Adopteq MigratorPlus® is an up-to-date, scalable and efficient content migration software for transforming legacy Domino application content to new modern platforms including SharePoint and Dataverse.

Why you need MigratorPlus®

Adopteq MigratorPlus® is the best content migration software to **help reduce your costs, risks and degraded user experience** by extricating your data from Domino.

1

Secure, reliable & efficient

We deliver the ability to validate migrated content down to document and field level, ensuring maximal security and fidelity with velocity migrations in mind.

2

All accessible content, metadata and attachments

We enable migration of applications with ease, whilst taking care of all rich text, in-line pictures, links, meta data, attachments and more.

3

Flexible catch-up capability

With MigratorPlus® you are in control of whether to migrate all or subsets of data, including the capability to perform delta migrations.

FAQ's

How quickly can we migrate?

- ⇒ MigratorPlus® can migrate thousands of documents per hour. How quickly your business adapts to change usually dictates the speed of your migration.

How do I know what to migrate?

- ⇒ Adopteq provides analysis consulting and the Investigator Plus™ product to uncover this valuable information.
- ⇒ MigratorPlus® reveals the structure of where content is stored so no need to migrate unnecessary forms or fields!

The design and code of my application is complicated. How can you migrate it?

- ⇒ Content is king, not the complexity, the workflow or Notes views. Reimagine building a simpler, modern application on today's business need, not how it was done in the past.

Can you help us unlock our archives from Domino?

- ⇒ Yes! Our unique way of converting NSF's to EML mean you can store archived content on any target file store, including cloud. EML retains the same look and feel as the original document whilst freeing your content from Domino and Lotus Notes!
- ⇒ Because we migrate to EML, mail content can also be easily migrated from Domino and found and stored the same way as your archived application content.
