About Adopteq's Documentation

Documentation for Adopteq's Products feature:

- Release Notes – Describes the current release of the product and any new and enhanced features, resolved issues, and known issues.
- Installation Guide – An orientation to the product's basic purposes, features, and capabilities. It documents system requirements and explains how to install the software and obtain licensing.
- Planning & Operation Guide – summary of the product primary components and features, overviews of component and process instructions and guidance.

Please note that Lotus Notes and Domino are used interchangeably within this document for ease of legacy understanding and wording.

Purpose & Audience

This document assumes the reader has a minimum of one year's experience using a Notes Client and has a good general knowledge of Domino Administration, the Domino designer client as well as Windows administration, SharePoint, and the Power Platform. If Domino/Notes topics mentioned in this guide are not understood, please refer to the HCL Notes or System administration documentation.

1. Release Notes for Archive Viewer Plus Version 3.0x

A. Introduction

Archive Viewer Plus is an EML reader with search capabilities used in conjunction with Migrator Plus Archives. There are two (2) available client products, namely Archive Viewer Plus Web and Archive Viewer Plus Desktop. The release updates state the client type with which the change refers.

These release notes provide information about the latest Adopteq Archive Viewer Plus release.

Release 3.0.2 - 24 May 23

Enhancements

Reference	ID	Description

Resolved Issues

Reference	ID	Description
Web	2baaa524	Provide full meta data search capability e.g., DocID or link.
Desktop		Fix so the container list refresh when toggling between tenants.

Deprecated Features

Reference	ID	Description

Upgrades

Reference	ID	Description

Known Limitations

Reference	ID	Description
Desktop		Microsoft.io.recyclableMemoryStream.dll file missing after the upgrade. This may be manually pasted after download from microsoft.com
Desktop		License valid up to date is not localized.
Desktop		Upgrade may enter a 'setup' loop. Resolution is provided in section 'Failed Upgrade'
Web		During setup of administration, one administrative and one top folder is selectable. Additional top-level folders are added within the administration console.

Release History

Mats Jansson 24 May 2023 Ver 1.2
