About Adopteq's Documentation

Documentation for Adopteq's Products feature:

- Release Notes – Describes the current release of the product and any new and enhanced features, resolved issues, and known issues.

- Installation Guide – An orientation to the product's basic purposes, features, and capabilities. It documents system requirements and explains how to install the software and obtain licensing.

- Planning & Operation Guide – summary of the product primary components and features, overviews of component and process instructions and guidance.

Please note that Lotus Notes and Domino are used interchangeably within this document for ease of legacy understanding and wording.

Purpose & Audience

This document assumes the reader has a minimum of one year's experience using a Notes Client and has a good general knowledge of Domino Administration, the Domino designer client as well as Windows administration, SharePoint, and the Power Platform. If Domino/Notes topics mentioned in this guide are not understood, please refer to the HCL Notes or System administration documentation.

1. Release Notes for Migrator Plus Version 4.1X

A. Introduction

Migrator Plus is a content migration product which migrates legacy content from Notes/Domino to EML, to SharePoint/Teams, Dataverse and CSV export.

These release notes provide information about the latest Adopteq Migrator Plus release

General	e72ad7	Resolved issue where the start move button was not changed back if running delta migration

Release 4.1.2 - 17 May 23

Resolved Issues

Reference	ID	Description
General	177e9b	Fix to make Log prefix columns to be created in new installations

Release 4.1.1 - 11 May 23

Enhancements

Reference	ID	Description
General	5db46ea	Changed the Installation text success message.
	ae608fa	Added a Store and restart button for Padding fields in the setup view.
	3082f75	More clarification, explanatory text, and validation to the built in screen resolution fix in Setup.
	3082f75	The store values of padding and windows login is also now shown when opening Setup.

	a186849	If MigratorPlus.nsf is not available on the server it will ask if you want to have it created, otherwise not.
	ef26b3c	New installation wizard
	77c670a	Moved Verbose logging checkbox to Log settings in Setup
SharePoint	6e91b13	Creation of content type will now be automatically added to the list
	e4537e9	Enhancements in conversion table Import of csv file.
	e4537e9	If there is mapping with conversions it will be highlighted in yellow in the list of mapped fields
	77c670a	Add of confirmation message boxes on "Create Columns" buttons.
	77c670a	Added a right click option for deleting mappings.
	77c670a	Changed the Create Columns button so it creates the columns on selected Content Type and confirms each column created.
	a186849	Added warning when changing column type.
	a186849	Made the Domino URL field to be editable.
	a186849	Conversions table in SQL is now in the table creation command.
Archive	f6f9186	Changed Logging for archive migrations to meet same pattern as SharePoint Logs
File Export		No changes

Resolved Issues

Reference	ID	Description
SharePoint	15941a5	The "Create columns" button will now work as expected as well as some controls so you cannot auto-map without first selecting a content type
		Fixed null value errors in the SharePoint part of mapping screen
Archive		No changes
File Export		No changes

Deprecated Features

Reference	ID	Description
General	542b36f	Removed ability to use profiles
SharePoint		No changes
Archive		No changes
File Export		No changes

Upgrades

Reference	ID	Description
General	f6f9186	Upgrade to new version will now check and create Columns LogPrefix, LogSuffix and LogDir
SharePoint	a186849	In upgrade the Conversion table will be added.
Archive		No changes
File Export		No changes

Known Limitations

Reference	ID	Description
General		Linked documents external to the database are not migrated.
General		Workflow is not migrated. Functionality is rebuilt using target automation such as Power Automate
General		Piped values or computed for display values are not migrated, only stored values in fields can be migrated.
General		Views are not migrated.
General		Domino security ACL's or Roles cannot be migrated.
General		Documents without a form, including stored forms will provide limited export potential.
General		Domino Platform specific interfaces and embedded objects cannot be migrated.
General		Screen resolution (common when using remote desktop) can be compromised but workaround built into the product.
