

Adopteq enables a global bank to Migrate from Domino to SharePoint and Power Apps

The customer, a global financial institution with operations across multiple regions worldwide, was seeking the right solution to analyze, migrate, and replace their legacy Lotus Notes/Domino databases. The driving factor was the end of support for their Version 9 infrastructure, prompting the need to modernize their application landscape by leveraging Microsoft technologies, specifically SharePoint, Dataverse, and Power Apps.

The migration project required a highly secure and stable solution capable of handling complex data, including Rich Text fields, attachments, in-line images, and crucial metadata.

All these requirements, along with the need for extensive transformation experience and development capabilities to support rebuilding their applications in modern platforms, led the customer to choose Adopteq, InvestigatorPlus and MigratorPlus for their entire transformation from Lotus Notes/Domino to SharePoint and Power Apps.

Project at a glance

- 500+ applications in scope.
- Thousands of users involved
- Financial Services global customer
- Migrated from Lotus Notes/Domino to SharePoint and Power Apps.
